

Quick Tach hookup in 10 minutes!

Quick Tach Receiver Bracket provides an easy hook-up in 10 to 15 minutes using a Hitch pin and C-clips to mount the Tile Pro to your tractor. Easy hook-up is not the only reason to buy a frame mounted tile plow. The Quick Tach is used to attach the Tile Pro to the frame of the tractor—not the 3-point hitch—giving the Tile Pro better stability for grade than the standard pull type plow.

MORE Advantages of Frame Mounted Tile Plow

Even transfer of weight - Frame Mounted Tile Pro attached above the rear axle has been engineered to evenly transfer reaction forces resulting in increased pulling capacity. TilePro ensures the best grading capabilities and maintaining plowing accuracy while keeping consistent speed through most conditions.

Rigid commercial frame mounted for stability and added traction.

Better stability for grade control than pull type plows. The plow maintains consistent vertical position to maintain grade.

No wheels to back over starting hole or to work around dirt piles. Provides more trash clearance.

Zero turning radius – Tile Pro turns with the tractor. All 4 wheels or tracks of tractor maintain constant ground contact and stability.
